

Business Continuity

Business continuity is an essential part of business management. In the event of a disastrous event resulting in loss of your business-critical applications, you need an efficient, tested and reliable plan to recover them.

Working in conjunction with your organisation's business continuity programme to meet defined recovery point objectives, we offer:

- Consultancy in high-availability systems and business continuity processes and plans
- Back-up and recovery management of business systems
- Hosted 'warm site' to provide ongoing access to your systems
- Standby database management
- Allocation of a Business Continuity Coordinator and annual operational test

Benefits to your organisation

- Improved business continuity planning
- Cost-effective business continuity procedures
- Reduced risk of total loss of business systems
- Continuous access to data
- Increased peace of mind
- Ability to demonstrate an audited and tested solution

Service elements

Business continuity consultancy

Tribal Managed Services can support your organisation in its review and development of business continuity plans and procedures and in the design of high-availability systems. Our experience enables us to advise on the most cost-effective options to support your business continuity programme.

Back-up and recovery management

Tribal Managed Services can implement, manage and test appropriate backup and recovery procedures to give confidence that you have the degree of system resilience and availability your business requires. This can include basic tape back-ups with data exports to sophisticated solutions providing high availability systems.

Hosted solution

Tribal Managed Services can provide a hosted 'warm site' to enable your systems to be quickly restored for staff to access data securely from any Internet capable location. The service is tested and demonstrated to you at the point of set-up and thereafter yearly, so that you have confidence it will work in a recovery situation.

Standby database management

In the event of a primary database failure, Tribal Managed Services can set-up and manage a 'standby database' service to provide efficient and reliable service continuity.
