

KTP CLIPBOARD LOOP

Create stronger relationships with your hard of hearing customers and comply with the Disability Discrimination Act

Background

The *KTP Clipboard Loop* is a specially designed low power induction loop system to aid the hard of hearing. Independent research has shown that the use of induction loop systems makes conversations with hearing aid wearers (whether customers or staff) easier and more relaxed. As around 1 in 7 of your customers or staff will have some form of hearing disability, it is now a requirement for all “service providers” to provide this facility under the Disability Discrimination Act.

Main Benefits

- Clearer, more relaxed, less time consuming conversations
- Hand held unit may be used anywhere, inside or outside
- Eliminates the embarrassment of having to shout
- Reduces the need to repeat words
- Advanced noise cancelling circuitry
- Portable
- Discrete and unobtrusive

Ease of Use

The *KTP Clipboard Loop* is designed for portable use with the electro-magnetic field extending to a maximum of 1.2m.

***KTP Clipboard Loop* is a single unit, which incorporates microphone, amplifier, induction loop aerial and rechargeable battery. The Power Supply Unit connects to any convenient mains outlet to re-charge the system.**

The system provides induction loop assistance for hearing aid users in combination with a clip for paper or pad and a firm, flat surface for ease of writing.

Technical Specification

DIMENSIONS	Loop Box	230mm x 320mm x 30mm
POWER REQUIREMENTS BATTERY CHARGER	Internal Ni-MH 9V rechargeable battery	7 Hr Typical operation between recharges
	Input	240 v AC
	Output	12v DC
CONTROLS	Microphone	Built-In
	ON / OFF Switch	Push button on front edge of unit
	Charging Input	Socket on front edge of unit
	Off / On / Battery status indicator	Red LED on front edge of unit
	Sound output indicator	Green LED on front edge of unit
