Fire/Heat Barrier Gel - Information Sheet

FBX Ltd Fire/Heat Barrier Gel is a unique product which provides protection from intense sources of heat and fire. It has been used by stuntmen and film studios and was involved in world record attempts for length of time in full body flames.

It can be used for personal protection or for protecting sensitive materials such as paint coatings, metal wood etc from intense heat and fire.

The **Solid Gel** can be moulded to any shape and thin uniform coatings up to 5mm thick will provide excellent protection for short periods. The gel can be used in engineering and plumbing for localised welding or brazing to protect sensitive areas.

The **Liquid Gel** can be used to spread over more extensive areas by being pasted or smoothed onto materials for both personal protection in sensitive areas. This product can be further diluted by the addition of a little water to make application easier. Obviously the thinner the coat the less the period of protection.

The product is odourless, non-toxic or harmful - see **Health and Safety Data Sheet**.

Users should conduct their own tests to confirm the suitability for the purpose and environment.

Accordingly, FBX Ltd offer no warranty since they cannot be aware of the ultimate use.
