Introduction

The format of last year's report has been retained for this report as it enables it to be produced more quickly. In previous reports, all records for all moth taxa have been listed. In this report, only records of taxa deemed to be significant are shown. These include taxa new to the County list and those of conservation importance. Additionally, the new format has allowed the reporting of details of butterfly taxa for the first time for many years.

There was a wide range of activities in the County during the year. Many site visits were made, trapping was carried out in gardens, searches for eggs, etc. All these activities have given rise to a large number of records of Lepidoptera in the County during the year.

Many recorders have contributed records to the Pembrokeshire Lepidoptera Database during the year. There is not space to list them all but the most significant are listed in Table 1.

Table 2 shows the levels of recording for the various families of Lepidoptera and Table 3 lists the species recorded as new to the County in 2006. Site visits made during the year by the North Pembrokeshire Moth Group as listed in Table 4 and Table 5 shows details of the Lepidoptera recorded for National Moth Night 2006.

Recording Levels

In 2006, a total of 19,261 records were added to the County database. These records were of 641 taxa from a total of 35 families. The full details are included in Table 2.

Site Visits in 2006

Each year, a number of site visits are made by the North Pembrokeshire Moth Group (NPMG) to various places, sometimes at the request of the owner or their representative and at other times to look for a specific species or groups of species. In particular, visits were made, in 2006, to five woodland areas in mid-Pembrokeshire. These visits were made as part of a contract by Butterfly Conservation with Forestry Commission, Wales. During 2006, the Group made a total 17 site visits. The list of sites is shown in Table 4.

National Moth Night 2006

We decided for 2006 to again extend the moth trapping effort as widely as possible throughout the county. In the event, a disappointing total of 7 traps were set at 7 different sites in the County from Hundleton in the south to Pengelli Forest NNR in the north.

In all, a minimum of 398 moths was taken from 63 taxa. The moths taken were counted in 6 traps; taxa only were listed for the other one. For this trap the quantity taken has been entered as 1, the minimum possible. Table 5, below, gives details of the trap locations, recorders and the numbers of taxa and individuals recorded.

Two of the seven sites took over 25 taxa; Hundleton with 28 taxa and Penybryn with 27., Only Penybryn managed to achieve a total in excess of 100 individuals with a total of 129.
